

# SDX: Supply Chain Visibility & Collaboration

A secure, cloud-based, multi-enterprise platform that provides customers end-to-end visibility and control over material-inputs — metals, plastics, chemicals, electronics, etc. — that flow into their products, equipment, or weapons systems. All without requiring you to change, replace or modify your existing ERP, PLM, or legacy IT systems.

## Availability of item-level data makes supplier risk data **actionable**

Item-level data reveals which part and materials have risk exposure. Being able to map and maintain the accuracy of item-level data — even when that data changes frequently — makes the mitigation of detected risks easier to achieve.

## Leverage SDX for:

- Multi-tier supply chain mapping and visualization
- Part and price benchmarking
- Ad hoc reporting, forecasting & analytics at the nth tier of supply (metals, electronics, chemicals, plastics, ingredients, etc.)
- Directed - buy, parts repricing, and reconciliations
- Part and material classification to enable matching of attributes to supplier capabilities
- Material standardization
- Automated part repricing based on material-input market fluctuations, true-ups, rebate calculation, etc.
- Supply chain risk management
- Regulatory impact analysis (USMCA, REACH, RoHS, Dangerous Goods, etc.)
- Chemical element / rare earth mineral / precursor analysis

**EXIGER**

ARE YOU READY TO  
SEE HOW SDX CAN  
WORK FOR YOU?

# Enable the 'smart' supply chain

SDX serves as the digital thread across your distributed manufacturing network, reconnecting your finished parts with the raw materials and component parts that go into them. Couple advanced supply chain analytics with a re-imagined approach to procurement. As a SaaS-based, multi-enterprise platform, SDX allows unprecedented cooperation and collaboration with your entire supply network.

## NO INTEGRATIONS REQUIRED

As much or as little integration with your ERP, MRP, or legacy IT systems as you're comfortable with.

## FLEXIBLE REPORTING NETWORK

A robust data framework provides powerful ad-hoc reporting capabilities and iron-clad security.

## MULTI-ENTERPRISE DESIGN

Facilitate collaboration across business units, alliance partners, and external stakeholders. One system of truth drives optimal performance.

## COLLABORATION DASHBOARD

Rich user-interface and executive dashboard provide prescriptive vs. descriptive insights. Built-in machine learning/artificial intelligence.

## SECURE, ROLE-BASED ACCESS

Accredited by FedRAMP and NIST-800-171 compliant. Role-based user access based on identity, nationality, and job function.

## REFERENCE LIBRARIES

A comprehensive set of part, process, material, supplier, and product reference libraries with built-in referential integrity checks.

**Our solutions help customers forecast, monitor, track, and trace:**

**33K**
